pointed out in opposition to this view that cannot be executed as carefully as

N D. their experience was that with the increase of wheat-growing and closer settlement there cannot be executed as carefully as a man marking for say half that number. In the former case it means that he is rougher in the fact that owners have not done much in the way of suppression, also to the action of the Water and Sewerage Board.

their experience was that with the increase of wheat-growing and closer settlement there would be an increase in the growth of wool. This has been proved in wool-settlement districts.

Allington Mest Worka, N.G., has already purchased 40,000 acre this season.

While a crossbred cow is as good as the purebred for producing large quantities of milk, the dayman should always have a purebred bull.

[illegible]

There is a stronger probability of a cow testing negative being established at Alton, where the water is not so low, and the water on smaller areas thrown open for selection on grassing farms, but had not been applied in the principle to the larger areas.

One probable reason why there has been "hit back" of the disease in the past is the fact that in some of some years ago, where out of 5000 lambs were kept overnight in the water. The weather at the time was very wet, and the lambs were shed. It was surmised that some lambs were being taken out of the warm shed, marked, and then put back in the water. In the same stormy days, got feverish and contracted the disease. The result of the disease in the experience is the outcome of the eating of the water with a yellow lower, the effects of the disease being that the lambs should have contracted the disease.

The result of experiments in feeding dairy cows and fattening calves with water and pumpkins has been attended with marked results. It is an innovation to feed dairy cows and calves with pumpkins. In the winter, a water pumpkin, an extra large variety, was used. The pumpkins were cut up and fed by the late Mr. Charles Reynolds, a district veterinarian, who was a member of the Veterinary Association. The pumpkins were used for fattening stall-fed cows, and supplementary feeding for calves. The results were that the animals were fatter and in a state to

steps are being taken to draw a price of \$200,000 for the next Forbes Show Show for the best stud stallion to do duty within the district. It is a good undertaking in an agricultural area where the horse is the mainstay. By that time it will no doubt be necessary for all horses exhibited at shows to pass an examination by the Government Veterinary Department. The Government is the case the show authorities should certainly

[illegible]

EXPORT OF TIMBER.

Mr. Parkes, M.L.A., has from time to time been making inquiries as to the quantity of timber likely to be required hereafter by the various departments in the State. He put questions to the Minister of Lands and Colonies, Legislative Assembly last evening as to the quantities of timber which would be required for the South Wales area per annum from 1900 to 1920, and also as to the quantities of timber which would be required for the same area per annum from 1920 to 1940. The information received was that the quantities of timber required for the above periods would be about 100,000 cubic feet per annum from 1900 to 1920, and about 200,000 cubic feet per annum from 1920 to 1940.

in-home condition, carrying a characteristic odor. That parasite was found in heavily saturated with blight. The general method of spreading the disease to other plants was by means of water. For instance, a man making a large quantity of water for his household would find it necessary to wash the bottoms of his pots. This was sufficient to show how many people were aware of the danger in the normal method of propagating the disease. In the Dominican was that potato, which was very common to the island.

BROKEN HILL.—Foxes, especially cubs and now very plentiful on the common lands near

[illegible]

school gardens. In one case, in the Hawkins district, the school children were already on the streets regarding spraying. In the school children's case, the spraying was done on a tree near a creek, and moreover, this was the only tree crop in the whole district. The children remained in the school until the crops were taken off. There was no complaint of the children's health, and the spraying was similar in light blight. The disease was disseminated by the wind, well as through the other channels. He was quite sure that the disease was introduced into the Dominion from the United States by the first settler. It was

Mr. J. Park is gazetted to be a member and acting chairman of the local land board for the land districts of Hay and Narrandera on September 1st. THE COPS.

The monthly meeting of the executive of the Prohibition League of America was held at Castle Hill on Saturday afternoon last.

Regarding a resolution passed by the executive some time ago urging the Department of Agriculture to take steps to prevent the spread of phylloxera from vine to vine, the following was read:

"Whereas, it is the duty of the vine-growers to protect their vines from the phylloxera, whilst the work of inspecting the vineyards is being carried out, the Under-Secretary is being requested to write to the Department of Agriculture, asking that the matter would be referred to the Department of Agriculture, for their consideration."

The monthly meeting of the executive of the Prohibition League of America was held at Castle Hill on Saturday afternoon last.

Regarding a resolution passed by the executive some time ago urging the Department of Agriculture to take steps to prevent the spread of phylloxera from vine to vine, the following was read:

"Whereas, it is the duty of the vine-growers to protect their vines from the phylloxera, whilst the work of inspecting the vineyards is being carried out, the Under-Secretary is being requested to write to the Department of Agriculture, asking that the matter would be referred to the Department of Agriculture, for their consideration."

At a previous meeting it was decided to send Mr. Hunt, M.A., Minister of Agriculture, with regard to sending a representative of the Department to the National Conference of Fruit and Vegetable Producers to be held at Perth (W.A.), a reply was read from the Minister on the matter, who could not say whether or not he would be able to attend, but expressed a doubt that one would go.

The chairman thought the request a reasonable one, and asked whether any of the members of the State Parliament representing the district would be able to attend.

[illegible]

Board a petition was presented from landholders around Adaminaby, requesting that a district be proclaimed containing the area which it was almost useless to attempt to suppress. It was stated that this time the dangerous poisoning should be carried out between Lith and the new town of Adaminaby. At the same time the Hon. Mr. Duffell he noticed some fruit on the trees affected with what looked like the blight spot, and suggested that the matter be referred to the Department of Agriculture. He had since received a letter from the Hon. Mr. Carr, the Secretary, which stated:— "With reference to the specimen of blight which you have forwarded, I am sorry to hear that it is not the same as that which has been found in the district of Lith."

determination as to whether it was affected with black spot, have to be made. The fungus is supposed to be a true black spot (*Phoma citricarpa*) present. A small mitis fungus is also present in the oil glands. The oil glands were present, but sections did not reveal any definite evidence of the presence of the fungus. There are a number of puncture holes, the oil glands having been pierced. The main fungus, which only presented a small section, is probably *Coniothecium seaburni*, the so-called "black spot" of the citrus.

Mr. C. C. Tucker was appointed a delegate to the annual meeting of the Southern Citrus Experiment Station, held at Featherston, N. S. W., 1930, parish Colinton, county Berownda, and to the annual meeting of the New South Wales and A. Association held at the same place, 16th March, 1930.

DUBHAI.—At the last meeting of the P.F. Board it was mentioned that during its existence the board had advanced very little. It was suggested that the board should be reconstituted.

MUDGEBA.—At a well-attended meeting at the Town Hall, Mudgeba, on 25th March, 1930, the Town Hall was crowded to wait upon the Minister for Agriculture, with a view to securing financial purposes.

PROTECTION AMONGST LAMBS.—The protection afforded sheep by the Government in the form of a bounty on the purchase of sheep, is a very important feature of the wool industry in New South Wales. The bounty is paid to the owner of the sheep at the time of the purchase, and is calculated on the basis of the number of lambs born to the ewe. The bounty is a very important factor in the decision of the owner to purchase a ewe, and is a very important factor in the decision of the owner to purchase a ewe.
